

LEVERAGING DARK WEB EXPERTISE TO ENRICH INTELLIGENCE

May 27, 2022

DarkOwl's robust darknet data enabled our partner, Blackpanda, to fully understand their customers' risk profiles and assess threats after they experienced a breach.

DarkOwl

DarkOwl uses machine learning to automatically, continuously, and anonymously collect, index and rank darknet, deep web, and high-risk surface net data that allows for simplicity in searching. Our platform collects and stores data in near realtime, allowing darknet sites that frequently change location and availability, be queried in a safe and secure manner without having to access the darknet itself.

Blackpanda

Blackpanda is Asia's premier digital forensics and incident response firm, hyper-focused solely on digital forensics and cyber crisis response. Our team consists of an elite cadre of risk and security experts from international special forces, intelligence, forensics and law enforcement backgrounds. We are highly trained, ready to respond to and help manage crises on short notice, when and wherever needed. To learn more, visit www.blackpanda.com.
