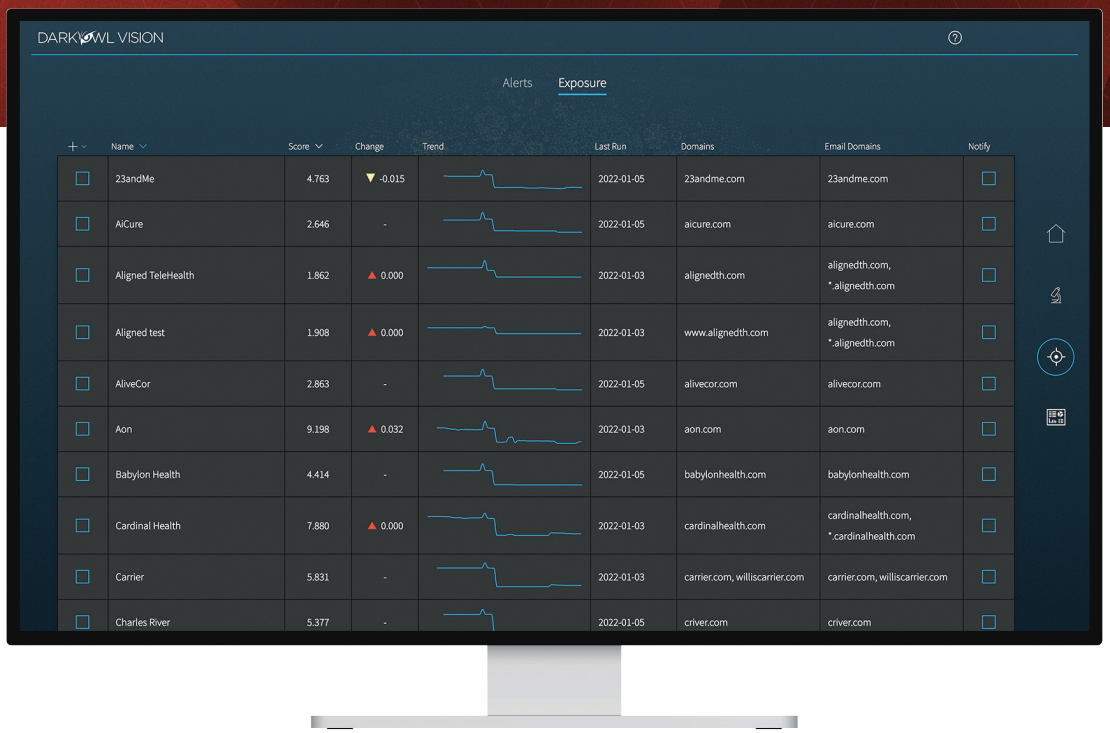
VISION UI

Interface Instantly with Darknet Data



Simple
Investigations can begin as simply as querying a search engine using key words or other operators

Safe
Review information without ever having to be exposed to harmful images, files, or individuals

Powerful
Boolean & Regex-supported search logic and custom filters allow for deep and highly targeted queries

Search and Monitor the most comprehensive Darknet Dataset

Vision is the industry leading platform for Analysts to simply, safely, and comprehensively search the largest commercially available source of Darknet data. Vision provides a user friendly interface with powerful querying capabilities to search, monitor, and create alerts for critical information.
